ELECTRONICS DIVISION OPEN DAY EXHIBITS

R25 Design Suite and Specialist Electronics Workshop

The Electronics Division exhibits demonstrate the wide range of skills and expertise that the 100 staff of the Division are able to bring to bear on modern scientific and engineering problems.

In the Design Suite, using examples of finished projects, the process of system design will be explained, including the technological choices that have to be made, system design, chip design and chip testing. Designers will be working on real projects in the design suite and will explain their work to you.

In the specialist electronics workshop, the prototyping facilities of the Division will be explained and demonstrated. Also in this location will be demonstrations of system assembly and testing, relating the test requirements to the end-use to which the systems are put.

Should you require any further information after your visit to the Division, please call either Peter Sharp or Andrew Kurzfeld (0235 446242 or 0235 445286) who will be happy to help.
